

Grow wisely.

Tempo[®] for Default Management

Life-Cycle Default Management Software

Boost Productivity | Protect Business Process | Collaborate in Real-Time

Tempo[®] is a fully-configurable default management software that tracks and manages the full default servicing life-cycle for servicers, attorneys, and vendors. Tempo[®] combines automation and vendor management to increase productivity without sacrificing quality, and ultimately improving the default experience for everyone involved.

Tempo® is an all-in-one default servicing system that encompasses everything from delinquencies to bankruptcy to foreclosure. Delivered via SaaS architecture, Tempo® is configurable and enables users to change workflow rules to increase productivity while providing significant risk and error reduction. Employing integration, real-time communication, and compliance-focused automation, Tempo® offers vendor management and interfaces with attorney networks, third party systems, and other servicing applications.

Boost Productivity

**Productivity happens on its own.
(Just kidding.)**

Tempo® provides workflow automation which eliminates many time-consuming tasks for associates, cutting down on the number of employees needed to manage the portfolio, and ultimately boosting productivity. Through automation, integration, and real-time communication, Tempo® enables you to avoid repetitive data entry into multiple systems, reducing error and ensuring compliance so that work doesn't need to be redone. With Tempo®, you will:

- Automate business process workflows
- Reduce risk and errors with less human intervention
- Improve process tracking with Holds and State activity features
- Configure and track changes via easy-to-use administration tools
- Integrate and communicate easily with third party systems
- Maintain compliance by observing state regulatory default laws

Protect Business Process

Tempo® be nimble... Tempo® be quick.

As a configurable end-to-end default management software, Tempo® can be adjusted to fit your existing business processes rather than force your business to adjust and bend to its rules. Servicing delinquent payments from day 1, and throughout the entire default life-cycle, Tempo's completely configurable platform molds to your business processes the entire way. In addition, automating your process workflows in Tempo® helps to provide quick and accurate results.

With Tempo®, you can:

- Make configurations to fit your business
- Change configurations as your process evolves
- Automate your process workflows for speed and accuracy

Collaborate in Real-Time

Real-time workflow, communication, and overviews make it so that no one is the last to know.

Real-time processing allows data and reports to be updated immediately with payment splits, balances, and other changes. When you communicate in real-time with third party software systems, you eliminate the inconvenience of waiting for nightly batch updates, and involved parties working with outdated data. With Tempo®, you can:

- Scale quickly and manage to critical timelines with real-time work assignments
- Keep internal and external parties informed with reportable communication
- Offer integration to third parties via web service API calls or flat file data transfers
- Access from any browser with real-time processing

About Sagent Lending Technologies

Inspired by a vision of where technology is going, Sagent Lending Technologies brings an entrepreneurial energy to clients that is grounded by industry-leading credibility. We work with some of the largest servicers in the country bringing a premier borrower experience and lowered cost of servicing front and center. Using the latest technologies, and keeping centered on compliance, we ensure our lender community can focus on growing their business.

Our product suite and extensibility give our lenders the power of choice and flexibility to evolve with their business needs. Sagent values stronger partnerships, a sharper focus, versatility and configurability, and the ability to move swiftly and grow wisely.
